# Consultants coal mining report

## Advanced coal mining insight

Designed by environmental consultants and geotechnical engineers, this report provides essential data and guidance on historical coal mining activity and the potential issues that could affect your client's site and the surrounding area.

## What does it cover?

- ✓ recorded **underground workings** including seam name, depth and extraction thickness
- ✓ recorded **mine entries** including mineral, conveyancing and treatment information
- ✓ mine **gas** emission and mine **water** treatment schemes
- ✓ coal mining **geology, claims** and surface **hazards**
- ✓ area of **probable** shallow mining
- ✓ **investigation** and remedial activity
- ✓ Coal Authority managed mine **tips**
- ✓ **licensing** and future mining activity

## Why you need it

The Coal Authority Consultants Coal Mining Report is your go-to technical report for understanding the mining features on your site and for informing your risk assessment. The Consultants Report can be used alongside other information sources, including our extensive archive of abandonment plans, to enable you to characterise the impacts of coal mining on your site.

## The right report for you and your client

- ✔ more comprehensive coal seam and mine entries information – build your geotechnical profile
- ✔ abandoned mine catalogue reference numbers for accessing the Coal Authority's unique archive
- ✔ larger mapping with more features for fast, easy identification of potential issues – improving client understanding
- ✔ tailored guidance ensures you are clearly pointed to additional data that is needed to complete your due diligence
- ✔ further support from Coal Authority's Planning, Permitting and Engineering teams available
- ✔ technical report designed to inform your desk based studies
