Mine Entry Plan & Data sheets

Additional information on recorded mine entries

Open spaces on the coalfield can be at risk from coal mining subsidence and even ground collapse. This movement can be caused by problems with entrances to coal mines, known as shafts and adits.

What does it cover?

any details of mine entry
treatment held

OS map showing
position of mine entries

confirmation of mine
entry source material

any recorded
dimensions of mine
entries held

co-ordinates of
recorded locations

Why you need it

If mine entries are identified on an open area of land, this report can provide additional information and a fixed location of the recorded position of the mine entry. You can choose exactly which mine entries you would like the information supplying for - making it a bespoke and tailored report to suit your requirements.

Why we're great to work with

- since 1994, the Coal Authority has managed the effects of past coal mining on behalf of the Government to protect the public and the environment, giving us our trusted heritage and knowledge of the coal mining industry
- we're recognised by major lenders as a leading and trusted provider of coal mining search reports
- our dedicated in house teams are on hand to support you with any questions you may have before, during and after purchasing a report
- access to our in house specialists means that we can provide dedicated support to conveyancers, geotechnical and environmental consultants, search providers and homebuyers direct

How to make an enquiry
