Mine Entry
Plan & Data sheets

Additional information on recorded mine entries
Open spaces on the coalfield can be at risk from coal mining subsidence and even ground collapse. This movement can be caused by problems with entrances to coal mines, known as shafts and adits.

What does it cover?

- any details of mine entry treatment held
- confirmation of mine entry source material
- co-ordinates of recorded locations
- OS map showing position of mine entries
- any recorded dimensions of mine entries held

Why you need it
If mine entries are identified on an open area of land, this report can provide additional information and a fixed location of the recorded position of the mine entry. You can choose exactly which mine entries you would like the information supplying for - making it a bespoke and tailored report to suit your requirements.
How to make an enquiry
If you have any questions or would like to find out more about our Coal Mining Risk Assessments, please contact us to speak to a member of our team using the details below.

Other services you may be interested in
