Advanced coal mining insights

Our Consultants Coal Mining Report offers a detailed, easy-to-read report for coal mining and hazard data, helping you create a thorough geotechnical profile. Designed by environmental consultants and geotechnical engineers, this report provides essential data and guidance on historical coal mining activity and the potential issues that could affect your client's site and its surrounding areas.

Key features

- ✓ Mine entry information within 100 meters of the site confirming, treatment description, grid reference, mineral worked, entry type and any conveyancing details
- ✓ Investigative and remedial activity within 50 metres of the enquiry boundary to identify and address any potential hazards
- ✓ Recorded underground mining information including colliery name, seam name, mineral worked, depth, extraction thickness, direction to working, dipping rate of seam and the last year mined
- ✓ The locations of any Coal Authority managed tips and opencast mines within 500 metres of the enquiry boundary
- ✓ Confirmation of any mine water treatment schemes within 500 metres and the direction in relation to the site
- ✓ Coal mining geology to mitigate potential hazards

Comprehensive data and guidance

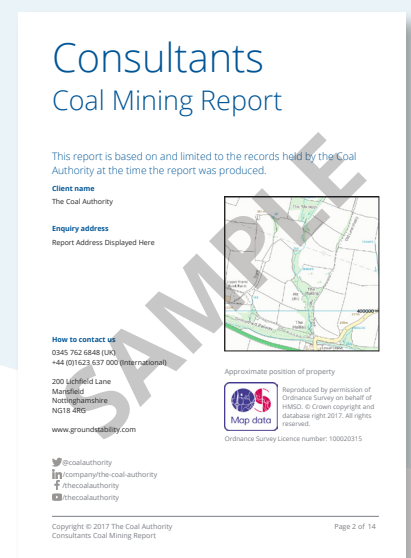

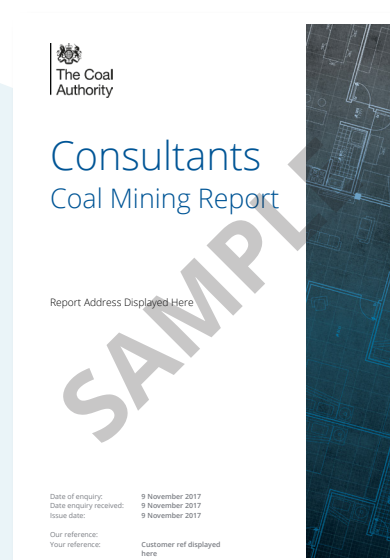

Our Consultants Report provides comprehensive coal seam and hazard data helping you build a comprehensive geotechnical profile with tailored guidance for thorough due diligence. It includes information on mine gas, mine water, subsidence investigations and remedial activities. You will also receive in-depth mine entry details of up to 100 meters of the site boundary allowing informed decisions and plan accordingly.

The report features a large scale map, highlighting the risks as features for easy identification of potential issues, enhancing client understanding. Additionally, you'll have access to the Mining Remediation Authority's unique archive of information, using abandoned mine catalogue reference numbers, making it easy to locate information.

The Consultants Coal Mining Report highlights significant past coal mining activities or legacy management that could impact a site. We also provide follow-up reports and consultancy, including permitting and planning conditions, enhancing due diligence and client relationships.

Why we're great to work with

- **Trusted source:** The most reliable information on coal mining risks for land development
- **Non-departmental government body:** A statutory body with comprehensive and up-to-date information
- **Comprehensive coverage:** Includes detailed information from over 120,000 mine abandonment plans and 176,000 recorded mine entries across England, Scotland and Wales
- **Customer service:** Dedicated support team ready to assist with queries, same-day report returns and a comprehensive after service
